

## Codified Security and Crowdar announce a new strategic partnership

Codified Security, the market leading automated mobile app security testing platform and Crowdar, a Gartner “Representative Vendor” and Forrester recognised company for crowdsourced testing services, today announced a new strategic partnership.

Martin Alderson, CEO, Codified Security, said “Crowdar’s experience and reach in the Latin American market gives us a foothold in a number of exciting mobile first economies where there is a real need to ensure that companies are protecting their reputation, IP, and their customer’s data with fast and precise mobile app security testing. We looking forward to working with the Crowdar team and benefiting from their local market knowledge, expertise, and reputation.”

Crowdar provides functional and automated software testing services through a vetted crowd of software testing professionals. Crowdar’s forward looking approach to mobile testing, local presence in Argentina and Manchester will be an asset to Codified Security going forward.

Javier Re, CEO, Crowdar, said “The opportunity to add automated mobile app security testing to our portfolio of existing mobile services will help us to meet a growing demand from our clients in the mobile banking and payments, Fintech, and healthcare markets that Codified Security specialises in. Crowdar looks to partner with companies that reflect our straightforward and agile approach and show a similar concern for understanding client needs.”

### ABOUT CODIFIED SECURITY

Codified Security is a market leading automated mobile app security testing platform that helps companies keep their mobile apps secure.

### ABOUT CROWDAR

Crowdar is a crowdsourced software testing company that specialises in automated and functionality testing. Crowdar was a Gartner “Representative Vendor” 2015 - 16 and featured as a Crowdsourced Testing company in Forrester’s 2016 report.
